

Hello Sir,

My name is Madhur Gupta and I belong to a middle-class family from Faridabad. Considering my family background details - we're 4 members in the family. Regarding my work profile, I'm having a total work experience of around 3 years in the Ed-tech industry and in particular, for around the last 2 years, I'm working as a Technical Content Engineer at GeeksforGeeks.

As far as my qualification is concerned, I have completed my B.Tech in Computer Science from AKTU, Meerut in 2018. And since my roots are from Hapur I have done my schooling including class 10th and 12th from there itself.

Other than that, if I talk about my strengths – I can say that I'm a quick learner, team player, and an adaptable person – and in my free time, I enjoy spending time with my family, improving my financial knowledge and stock market skills, and sometimes writing poetries or sketches.

As you'd have known - I'm looking forward to building a career in the Data Science domain and for the same reason, I've enrolled in a Data Science course at EdYoda. Firstly, let me clear this, the reason behind switching to a career in Data Science doesn't mean that I don't like my current work - in fact, content creation is something that one should do despite being from any job domain. However, I want to start a career in Data Science because of several other reasons like my passion for doing research, using analytical approaches to solve problems, playing with data, incorporating technology into my work, etc. And I think Data Science is one of those domains that perfectly matches these qualities or practices.

Also, the growing demand, plenty of career options, and growth opportunities in the Data Science domain made me choose this particular field for building a career in it.

That's all about me. And yes, thanks for the opportunity given to introduce myself!
